

35. (Previously presented) The information communication device as set forth in claim 1, wherein the information selecting section selects, from out of the collected device information, device information that is of a confidential nature to be converted into attached data.

Add the following claims:

36. (New) The information communicating device as set forth in claim 1, wherein said information election section selecting is at the target device.

37. (New) The remote management system as set forth in claim 8, wherein said information selection section selecting is at the target device.

38. (New) The information communication method as set forth in claim 9, wherein said selecting is at the target device.

39. (New) The recording medium storing a computer program as set forth in claim 10, wherein said selecting step is at the target device.

### **REMARKS**

The foregoing amendments add claims 36-39 dependent from claims 1, 8, 9 and 10, respectfully, that further limit the transmission processing selection to "at the target device." These claims are believed to be clearly allowable.

For the reasons stated in the Remarks on pages 13-16 of the Amendment filed on September 7, 2006, Applicants again urge that the selecting can occur immediately at a target device (e.g. sub CPU 601(e) of device 30 in Fig. 3) or at a local PC 11 or 13 (Fig. 4) associated with the device 30. The specification at page 40, last three lines, to page 41, top 2 lines, is in point. As claims 1, 4-10, and 33-35 are therefore believed to define patentable differences over the prior art of record.

Entry of the Amendment and allowance of the application are respectfully solicited.

Dated: December 15, 2006

Respectfully submitted,

By
